

Global Trends in Feed Industry

CLFMA 51st AGM & 60th National
Symposium 2018

Rajeev Kr Taneja _ Feed & Oil _ South Asia

Innovations for a better world.

Serving the Feed and Oil industries.

Poultry Feed

Aqua Feed

Oilseed Preparation

Technology leadership

Reliable machinery

Vast engineering experience

Extensive customer service

Full automation control

Training and support

Cattle Feed

Premix & Concentrates

Main drivers of the global feed market.

Populati
on
Growth

35% world population growth 2015 – 2030

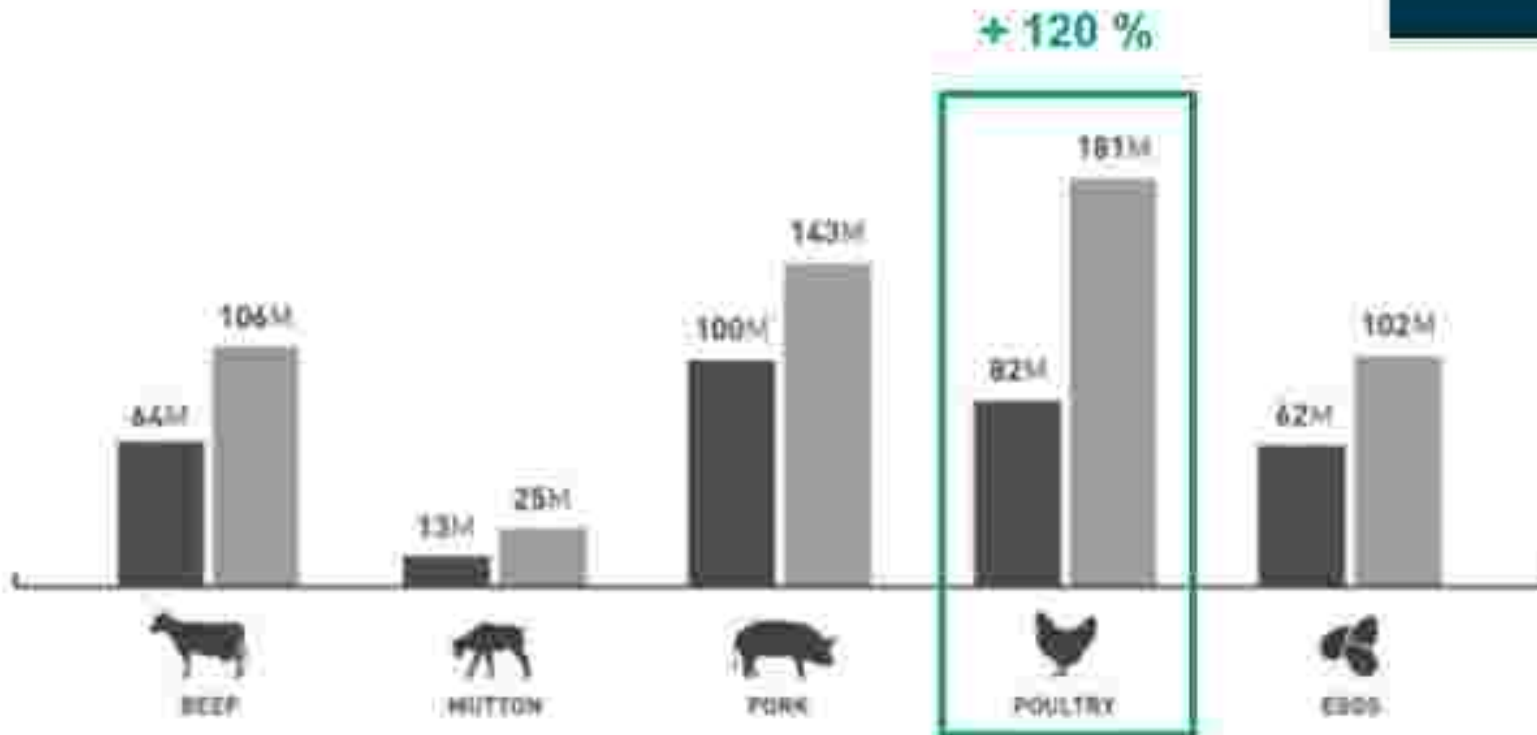

Changin
g
Eating
Habits

40% per capita meat consumption 2000 – 2030

... are the power fuel for our business.

The world's excessive appetite for meat and other animal proteins fuels our business.

Global demand for meat per animal type (in tons, 2005-50)

Growth in all animal segments

Three major trends transforming the industry.

Animal Nutrition & Sustainability

Feed Conversion Ratios

Changes in genetics of species

- Nutritional advice
- Particle granulation, etc.
- Less antibiotics needed

Feed Safety

Anti microbial resistance

- Validated hygienization
- Mycotoxin reduction
- Feed safe design

Internet of Things

Master efficiency and quality

- Traceability
- Online data clustering
- Self regulating production

Animal Nutrition & Sustainability.

Animal Nutrition & Sustainability

Feed Conversion Ratios

		1 : 6
		1 : 3
		1 : 1.5

Changes in genetics of species

- Nutritional advice
- Particle granulation, etc.

Two Stage Grinding

Particle Size Measurement

Multi-NIR Inline System

Two stage grinding.

Influencing particle size to increase FCR.

Example parameters

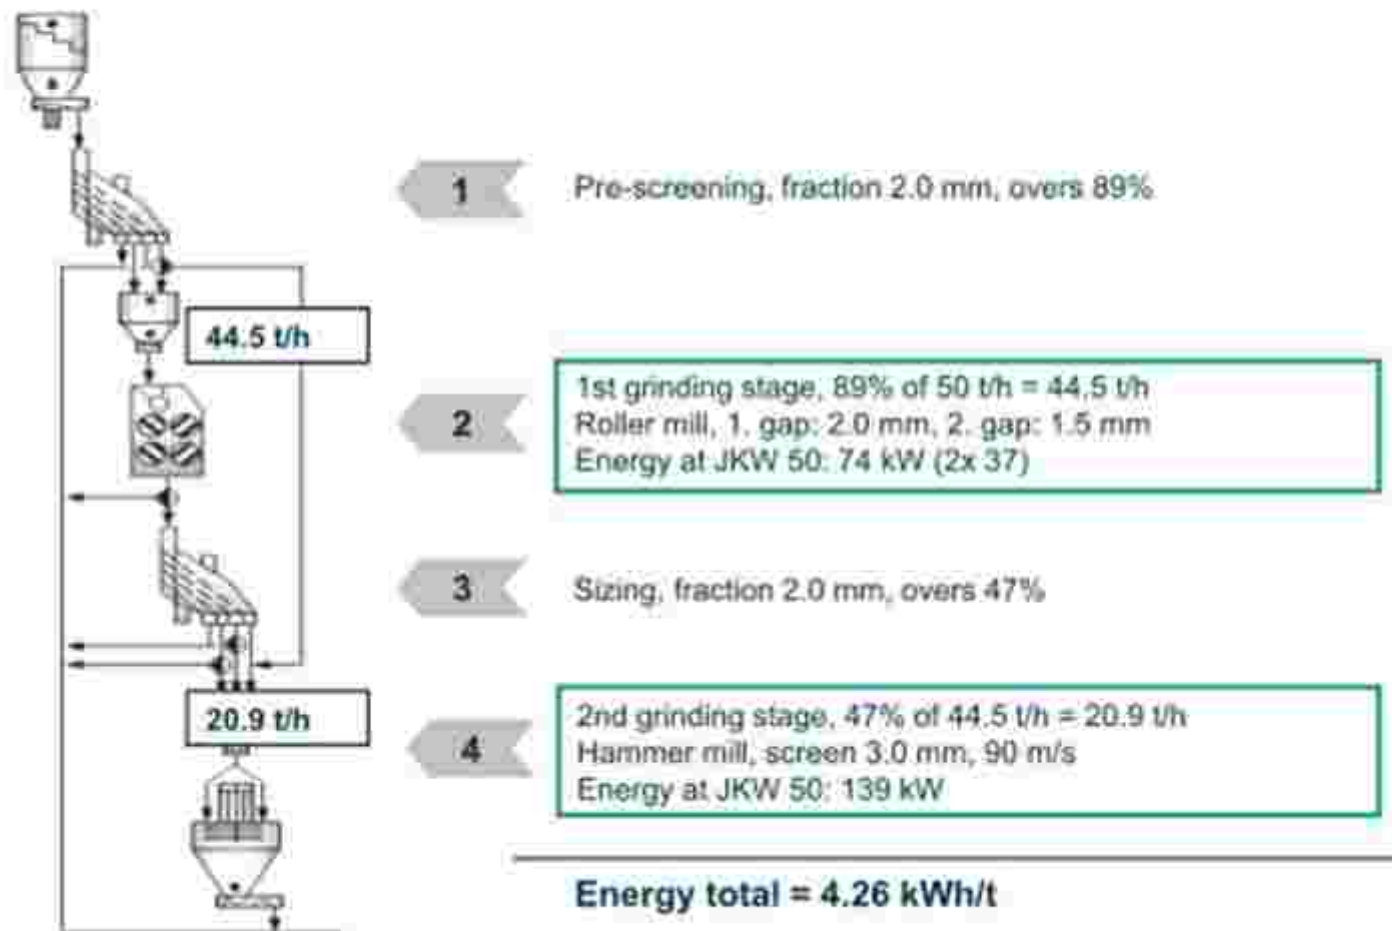

- Broiler feed, corn/wheat base
- Plant capacity: 50 t/h
- d_{50} = 630 micron

Energy consumption

- Direct grinding hammer mill:
296 kW = 5.92 kWh/t
- 2-stage grinding
213 kW = 4.26 kWh/t

28 % energy savings
(1.68 kWh per ton)

Source: Experiential test of Swiss SFT institute in feed lab.

Impact of particle size distribution on animal health and performance.

Pilot test conducted on three poultry farms / USA

Goal: determine optimal particle size distribution for poultry

Feed given to the animals:

- Coarse/textured feed (roller mill)
- Fine/non-textured feed (hammer mill)

Results for coarse/textured feed

- 20 % higher weight of the muscular stomach (indicator of animal health)
- Lower mortality rate
- Slightly higher animal performance

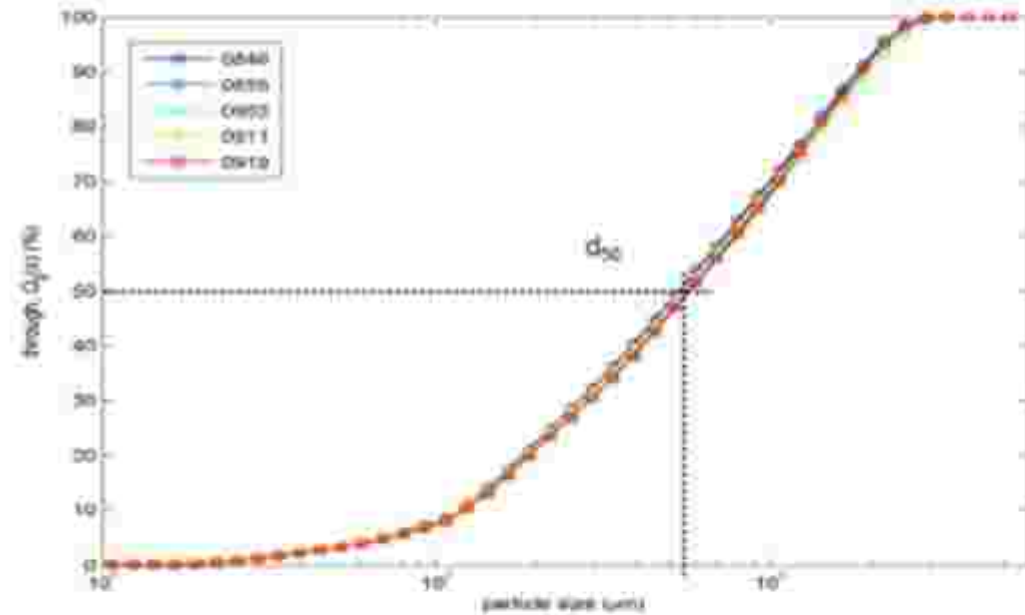

Particle Size Measurement

Ensuring consistent quality & best utilization of raw materials.

→ Sampling at the mixer (homogeneous product)

→ Precise measurement (50 particle classes, high- and low-resolution channel)

Inline measurement of moisture, fat and protein

A Raw material intake

B Mixer **C** Conditioner

C Conditioner

D Cooler

Bühler Multi-NIR Inline

Benefits of moisture regulation alone...

- **Lean cost formulations**
 - Reduced “safety margin” of moisture content in formulation due to consistent measurements ($\pm 0.3\%$)
- **Constant product quality, app. 5 % more line availability**
 - Continuous product quality, even in case of moisture fluctuations of raw materials
 - Increased line availability due to reduction of fines
- **Energy savings in pelleting process**
 - Reduction of Pellet-Mill SME by up to 10 % due to optimized moisture content
- **Product safety and traceability**
 - Continuous monitoring of moisture and fat content
 - Reporting function of stored data / Traceability

Typical ROI conservative assumptions

Line capacity:	100'000 tons/year
Moisture increase:	0.5%
Sales price feed:	300 €/ton

Annual savings:	150'000 €
Return on investment:	< 1 year

The Bühler Feed & Food Safety Initiative

Hygiene from plant, machine to operations

Mycotoxin: prevention & reduction

Process design, validation & monitoring

Know how and training

Examples of Bühler Food and Feed Safety solutions.

From hygienic design ...

Kubex T Pellet Mill

up to 20 % less energy consumption and hygienic design

... over system solutions for mycotoxin control

SORTEX Optical Sorting

...to inactivation technologies.

HYMIX Plus Conditioning

100 % of the feed mash is heated to the set temperature prior fed to the pellet mill (salmonella, bacteria and mold reduction)

The challenge with Salmonella in feed and food

Salmonella: a bacteria that harms humans and animals
Raw material is contaminated with Salmonella
Salmonella can well survive in dry environment
Salmonella has to be inactivated in feed & food processing

A scanning electron micrograph (SEM) showing numerous Salmonella bacteria. The bacteria are rod-shaped and appear as orange-brown structures against a dark blue background. A scale bar at the bottom right indicates a length of 1 micrometer (1 μm).

1 μm

Image: Janice Haney Carr, Center for Disease Control and Prevention, USA

The HYMIX Plus Conditioner inactivates Salmonella reliable.

- 100% of the feed mash is heated to the set temperature.
- 0% re-conditioning or dumping of insufficiently treated feed mash.

up to
5%

Increased line capacity

up to
50%

Faster start-up of pellet mill

Internet of Things is not a vision, it's reality.

"A network of internet-connected objects able to collect and exchange data using embedded sensors."

Device management

- Enable experts to remotely diagnose problems without user intervention.

Better decisions through data analytics

- User behavior data can be used to improve product design.
- Data history helps to predict necessary maintenance.
- Business processes can be optimized.

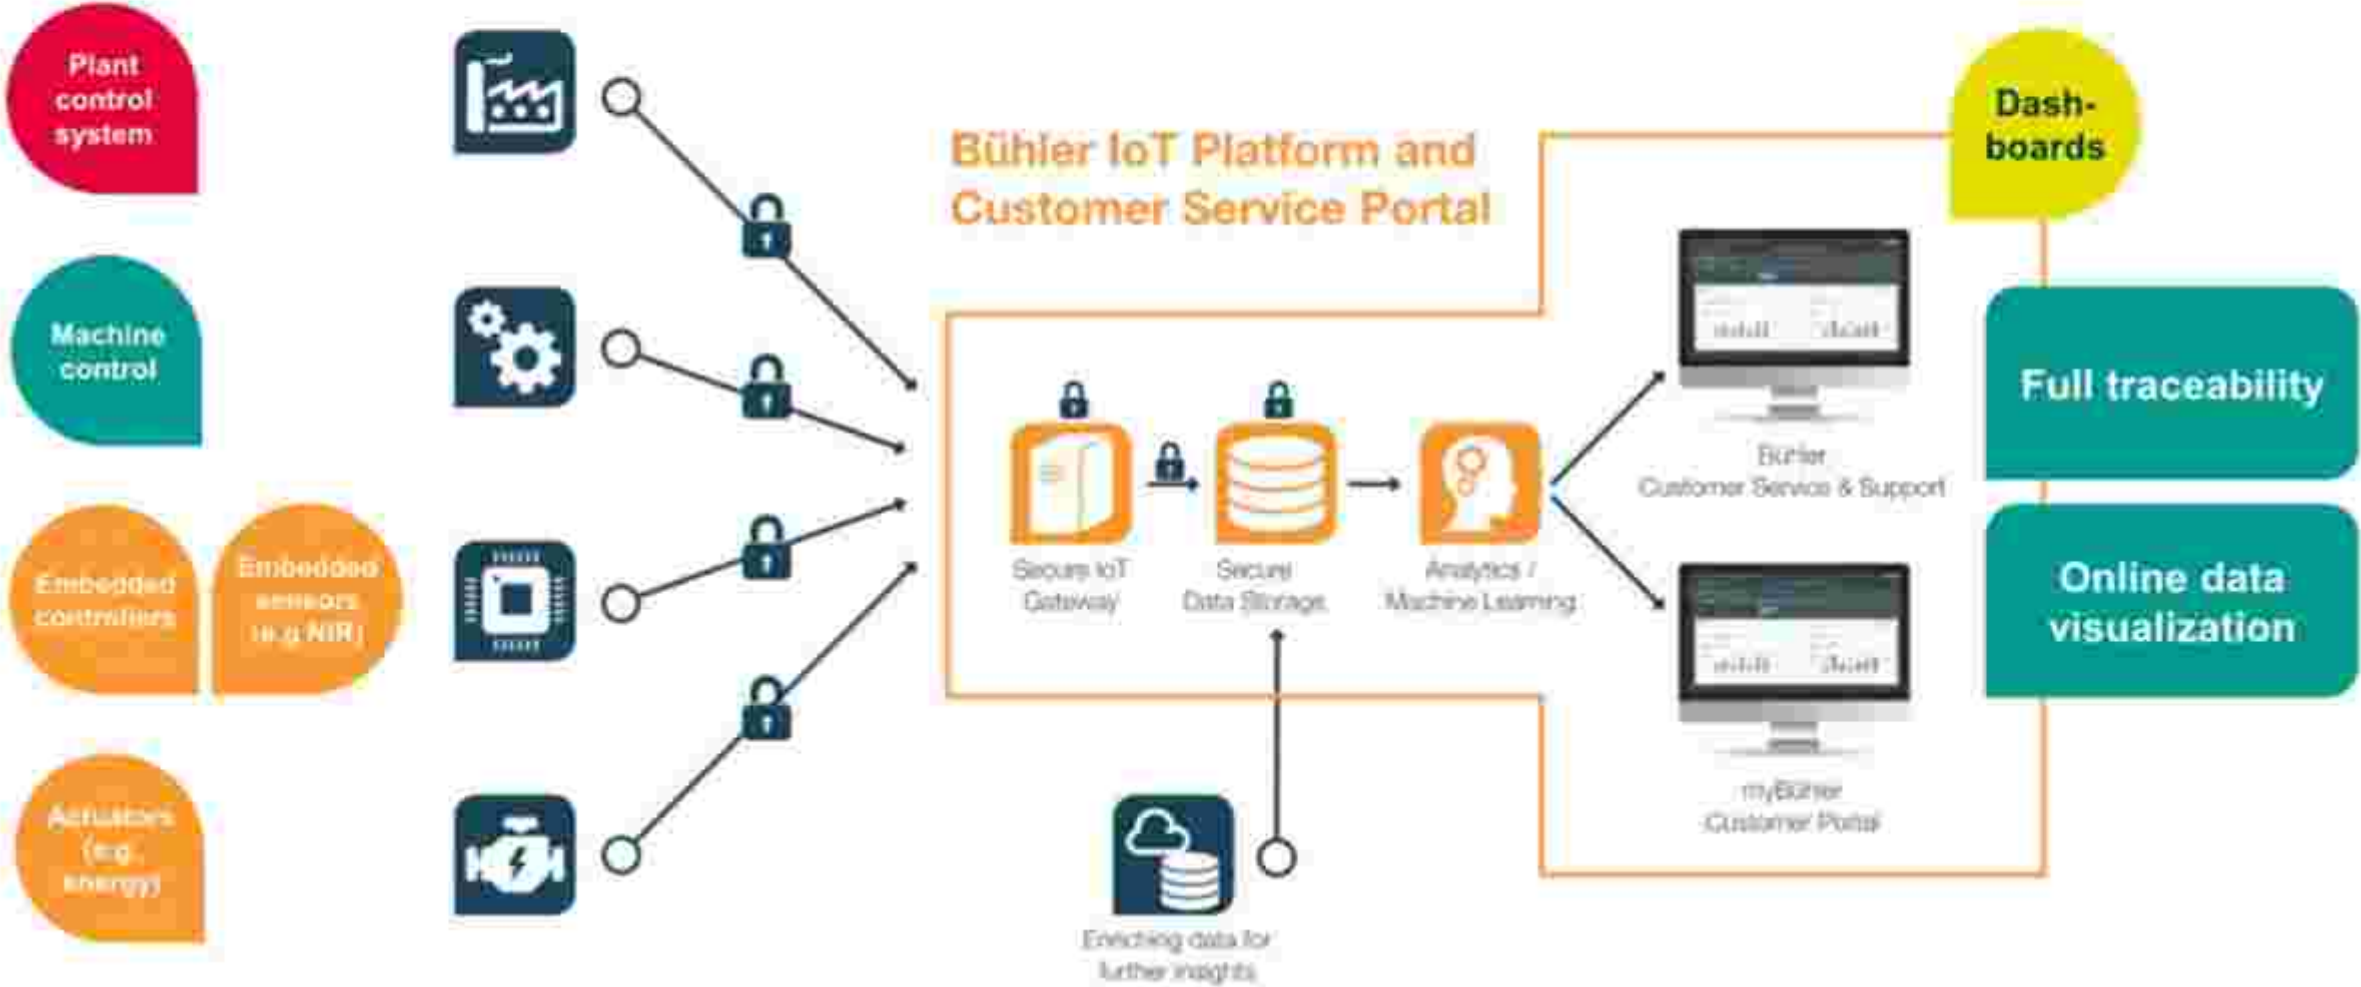

Self-regulating production

- Individualized products can be produced cost efficient.

Traceability

Everything under control – with Bühler's IoT platform.

Better decisions, powered by smart data.

Dashboards

- Key performance indicators (KPI's)
- Energy consumption
- Quality data
- Downtime

Mobile Applications

- Management information
- Maintenance support
- Plant operation

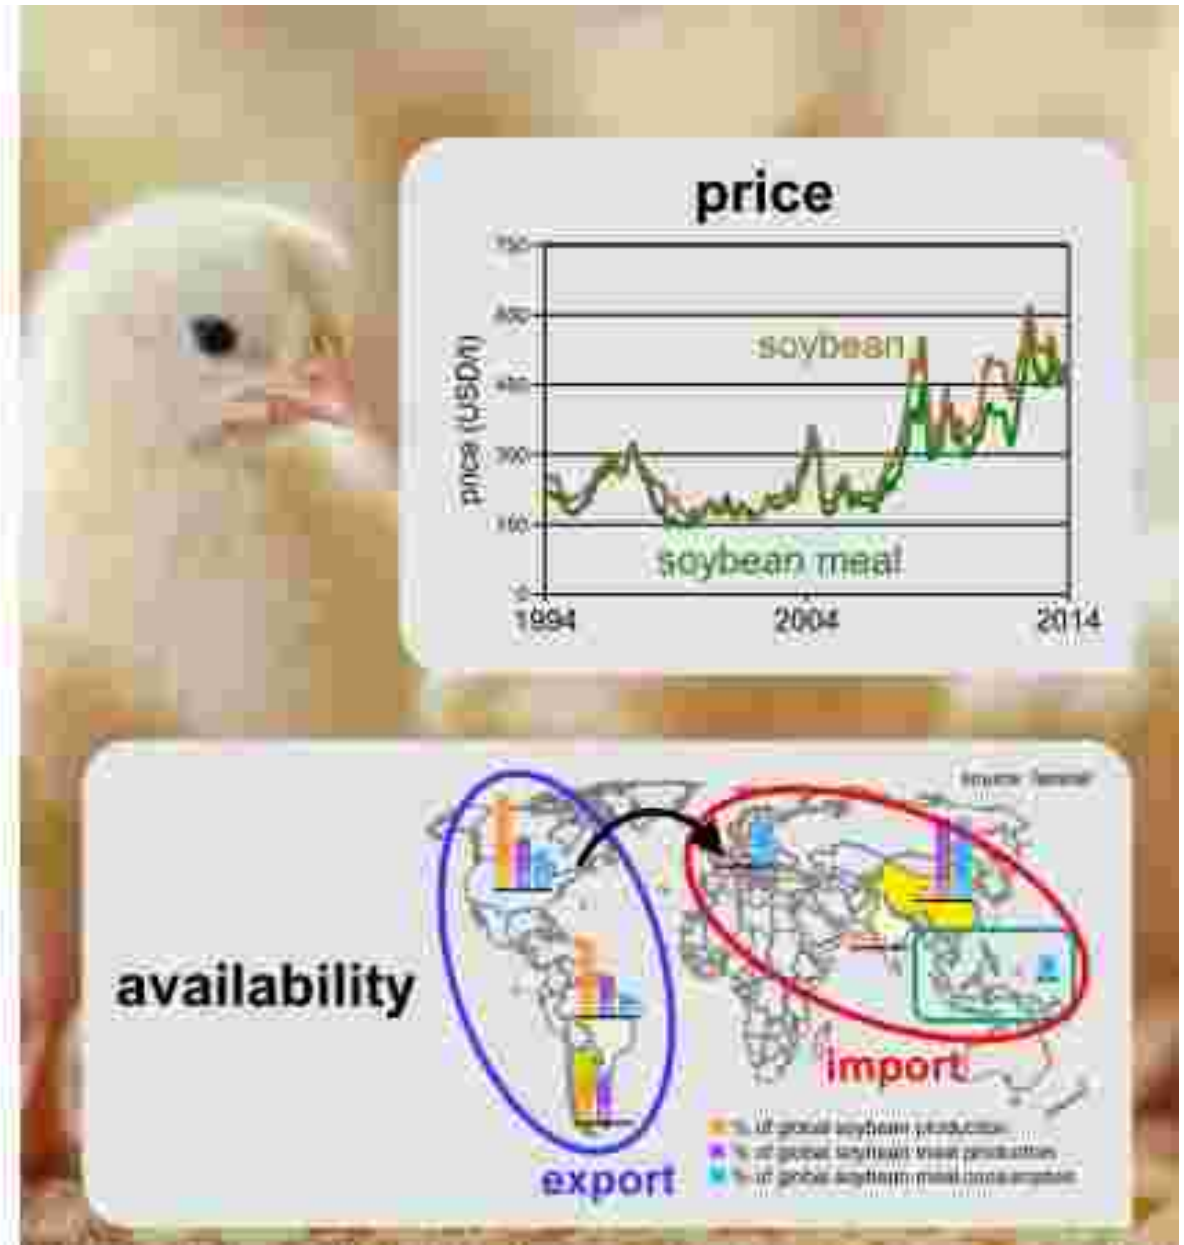

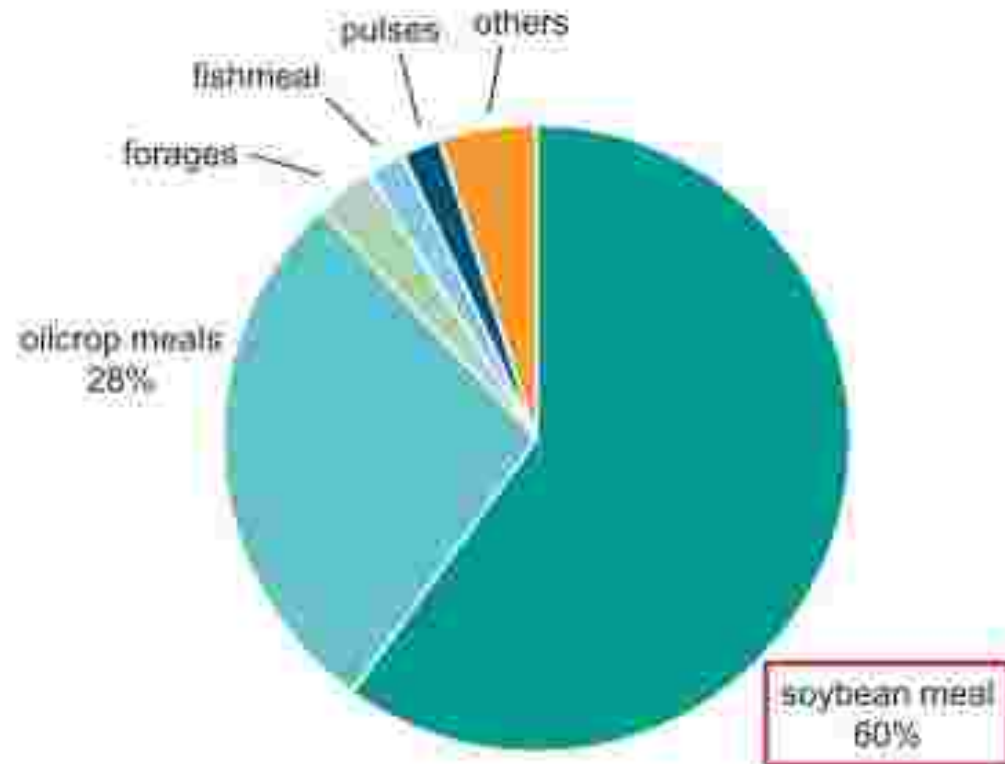

Feed Safety

- Product track and trace
- Logistic support
- CCP monitoring
- System collaboration (ERP / LIMS / Least cost formulation systems)

Resources become scarce as world population grows.

Protein sources in animal feed today

Alternative raw materials will play a fundamental role in the future.

Insects are a promising protein source in feed and food.

- Insects can grow on organic residues, which are available all around the world.
- Farming insects needs less space.
- Insects are very nutritious for animals and humans.

The future is not predictable, but can be shaped!

Thank you for your attention!
